

## **RAINWATER HARVESTING**

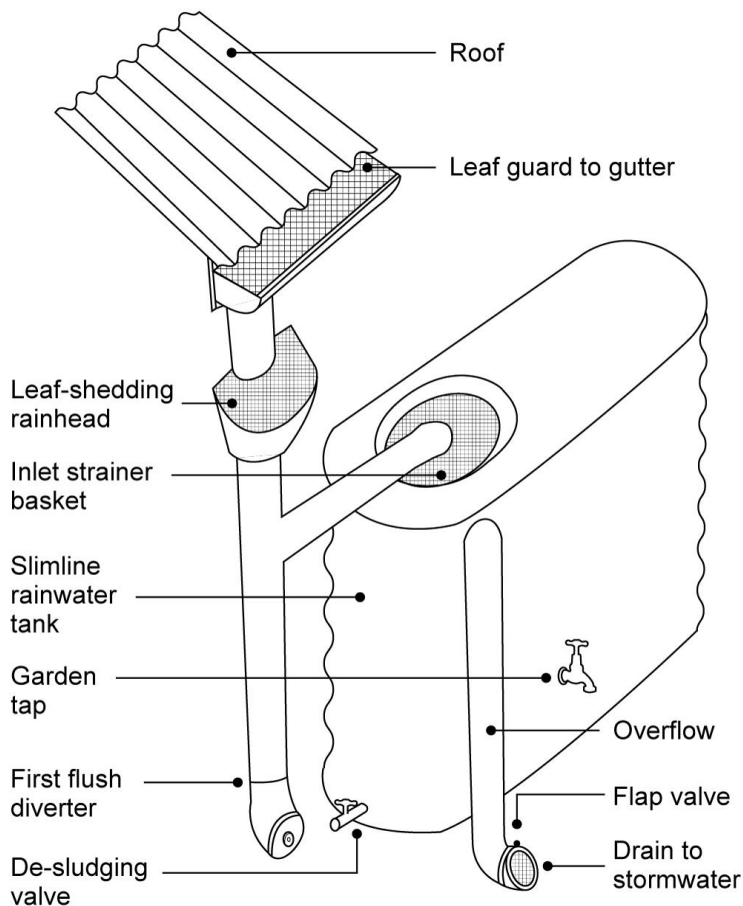

Questions:

- Do you have a Rain Water Tank & want to **save money on your rates?**
- Have you cleaned the gutters, filters, strainers & first flushes in the last 6months?
- Is your pump & controller working properly?
- Do you need another Rain Water Tank or new pump?

If you answered yes to any of these questions, you need our help!

The Rainwater Harvesting Association of Australia recommends all these things should be checked regularly to **save money**, avoid blockages, bad water quality & pumps failing.

Contact us today on **498311 07** or email: [wayne@civconws.com.au](mailto:wayne@civconws.com.au) to book an inspection.

### Advantages:

- It provides self-sufficiency to water supply.
- Rainwater harvesting is less expensive, easy to construct and easy to maintain.
- Rainwater Harvesting slows down water flow, contains potential floodwater and reduces spread of pollution.
- The water is convenient and accessible; valuable time and effort are saved in collecting and/or hauling water.
- It provides a supply of water to meet our future needs.
